PRESENTATION

I take as my point of departure the dawn of
psychoanalysis. Hysterical patients presented somatic
problems for which traditional medicine could give no
answer; this led Freud to invent a new mode of
treatment. For Freud it meant postulating the existence
of the unconscious. The hysterics' symptoms all
revealed a sexual origin. During the same period,
leading sexologists and pioneer activists, like Magnus
Hirschfeld, worked closely with Freud, which seemed
to promise a fruitful collaboration between the fields.
Unhappily prejudice prevented this collaboration, and
sexology and psychoanalysis took divergent, even
opposed paths. Historically, psychoanalysts have taken
a normative position by reading transsexuality as a sign
of pathology. Nothing could be further from what one
learns in the clinic about sexuality. The transgender
experience both reorients psychoanalytic practice and
reframes debates about gender and sexuality.
This workshop will explore psychoanalysts' prejudice
that obfuscates clinical efficacy. This program will
expose participants to new clinical modalities to
approach sexual and social difference. Clinical vignettes
will help participants see the practical dimension of the
presentation's claim.

INSTRUCTION LEVEL: INTERMEDIATE

OBJECTIVES

At the conclusion of the program,
participants will be able to:

1. Assess the controversial yet central role played
by psychoanalysis in the history of
transsexualism.
2. Discuss the idea that transgender is always a
pathology.
3. List examples of "gender trouble" and
provide practical responses and strategies
from a psychoanalytic clinical point of view to
address the specific needs of minority
patients, those segregated by language, sex,
gender, race, and income.
